

Research

Are you interested in conducting studies, research and improve or develop concepts, theories and operational methods to advance evidence-based healthcare? Medical research professionals provide all of the necessary resources for clinical research trials. Usually they study diseases and other physical conditions that affect humans in order to improve treatment options or lessen the incidence of diseases.

A medical research professional works in various settings, including government institutions, public and private academic institutions, clinical research organizations, private or cooperative research groups. The duties may include: data collection, analysis or monitoring, recruitment and enrollment of human subjects, development of consent documents, preparation of reports, program administration.
